25. The aforesaid system should be able to perform phototrophic cultivation applications. Plant suspensions, algae and phototrophic bacteria (such as cyanobacteria or green sulfur bacteria) should be grown under customized and variable lighting conditions.

26. Up to four LED Illumination Devices integrated with emitted light spectra optimized to meet various photosynthesis requirements.

27. An integrated Illumination device providing optimum light conditions for growth and photosynthesis must be quoted. By selectively varying the light intensities of different wavelength channels (at least 3) both the spectral composition and the overall intensity of the resulting light should be adjusted according to individual requirements. In addition to a continuous illumination mode the photo module should support the configuration of variable day/night cycles and the programming of different flash modes.

28. Three individually controlled channels are to be with absorption wavelengths 453 nm, 572 nm, 625 nm, 640 nm, 660 nm and 780 nm reflecting the relevant chlorophyll.
